

Week 17 Report

Group Members: David Jones, Brennan Kandalauft, Luis Ruiz

Client: Keith Hengen

Project Status: We spent this week trying to produce our jigs. David focused on reconstructing the PCB with a consultant. Brennan worked with reactive ion etching to try creating a grid that could be used to align the carbon fibers. Luis looked into making a similar guidance grid with 3-D printing. Additionally, we have reached out to the Hengen lab about ordering and reimbursement but they have failed to get back to us, creating a bit of a bottleneck.
